PROFESSIONAL SUMMARY

Senior DevOps Engineer and AWS Cloud Architect with 6+ years of hands-on experience designing, deploying, and managing production-grade cloud infrastructure — and 15+ years in IT overall. Holds 7 AWS and cloud certifications including AWS Solutions Architect Professional, AWS Security Specialty, and HashiCorp Terraform Associate. Proven track record of cutting deployment times by ~40%, reducing infrastructure costs by up to 60%, and achieving 99.9% production uptime across fintech, IoT, and healthcare domains. Deep expertise in Kubernetes/EKS orchestration, Infrastructure as Code (Terraform), and end-to-end CI/CD pipeline engineering.

AWS & CLOUD CERTIFICATIONS

- AWS Solutions Architect – Professional
- AWS Certified Security Specialty
- AWS Certified Developer – Associate
- AWS Solutions Architect – Associate
- AWS Cloud Practitioner
- AWS AI Practitioner
- HashiCorp Terraform Associate
- *Pursuing: Kubernetes CKAD*

TECHNICAL SKILLS

Cloud & IaC	AWS (EC2, EKS, RDS Aurora Serverless, S3, VPC, Bedrock, IoT Core, CloudFront, Route 53, CodePipeline, Lightsail) • Terraform • Cloudflare
Containers & Orchestration	Kubernetes • AWS EKS • Docker • Helm
CI/CD & Automation	GitHub Actions • AWS CodePipeline • Bash Scripting • YAML
Observability & Security	Grafana • Prometheus • Sentry • SonarQube • WireGuard VPN • AWS IAM • AWS Security Hub
Networking	VPC Design (Public/Private Subnets, NAT, IGW) • Route 53 • CCNA • Cloudflare DDoS Protection
Databases	MySQL • AWS RDS • Aurora Serverless
OS & Scripting	Linux (Ubuntu, CentOS) • Bash • YAML

KEY ACHIEVEMENTS

- Reduced deployment time by ~40% through CI/CD automation using GitHub Actions across production and staging environments.
- Cut infrastructure costs by ~60% via optimised AWS architecture and cost-effective staging environments using Lightsail and Docker.
- Maintained 99.9% uptime for production systems handling thousands of daily transactions across fintech and IoT platforms.

- Built and deployed an AI-powered chatbot using AWS Bedrock, automating customer support workflows and reducing ticket volume significantly.
- Improved system observability and reduced MTTR by ~35% using Grafana and Sentry for real-time monitoring and alerting.

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer & AWS Architect | **MTM Payment – Evo Tracker** | Kuala Lumpur, Malaysia *Jul 2022 – Present*

- Architected end-to-end AWS infrastructure using Terraform IaC — VPC with public/private subnets, EC2 auto-scaling groups, RDS Aurora Serverless, EKS clusters, and IAM roles — achieving 99.9% production uptime.
- Designed and maintained GitHub Actions CI/CD pipelines for production and staging, reducing deployment time by ~40% and eliminating manual release errors.
- Deployed and managed EKS (Kubernetes) clusters for containerized microservices, enabling scalable workload orchestration and zero-downtime rolling deployments.
- Integrated AWS Bedrock to deliver an AI-powered customer service chatbot, automating routine support inquiries and measurably reducing ticket volume.
- Designed a Smart Home IoT rental system using AWS with real-time device management across multiple properties.
- Implemented Cloudflare CDN for frontend hosting and API DDoS protection, reducing average page load time by 30%.
- Established cost-optimised staging environments with AWS Lightsail and Docker, cutting staging infrastructure spend by ~60%.
- Built an E-Invoice system and a Crypto/Tron-integrated payment platform on AWS, processing thousands of daily MasterCard transactions.
- Led a cross-functional engineering team, aligning sprint deliverables with business objectives and improving team velocity by ~25%.

DevOps Engineer & Senior Software Engineer | **UMCHTech** | Kuala Lumpur, Malaysia *Oct 2019 – May 2022*

- Provisioned and managed AWS infrastructure — EC2 auto-scaling, Route 53 DNS, RDS production databases, and WireGuard VPN for secure private access.
- Built a Grafana Cloud + Prometheus observability stack for EC2 monitoring, reducing Mean Time to Resolution (MTTR) by ~35%.
- Integrated SonarQube into the CI pipeline for automated code quality enforcement, cutting critical defects identified in CI by 60%.
- Leveraged Cloudflare DNS and Worker Pages for CDN acceleration across multiple client projects.
- Led development of a Multi-Module Remote Health Monitoring System with real-time patient data, Zoom API-powered video consultations, and alert management — expanding the platform by 10+ modules over 2.5 years.
- Managed Sentry for production error alerting, enabling proactive incident response and reduced mean time to detection.

Software Engineer | **ArchitWeb** | Kuala Lumpur, Malaysia *Dec 2017 – Sep 2019*

- Developed eCommerce and job portal web applications; integrated PayPal and Stripe payment gateways into a SaaS live support chat platform.
- Managed projects in Jira; built and deployed custom PHP MVC applications with MySQL backends.

Infrastructure Engineer , Servers Department | **Syrian Telecom (Tarassul ISP)** | Syria *Nov 2008 – Aug 2017*

- Managed LAN infrastructure, network equipment, and hosted systems for VIP enterprise clients over a 9-year tenure, building foundational expertise in networking, server administration, and ISP operations.

PROFESSIONAL DEVELOPMENT

- AWS ML Engineer Associate
- AWS CloudOps Engineer Associate
- Kubernetes KCNA
- Kubernetes CKA – Certified Kubernetes Administrator
- Observability with Grafana
- Alibaba Cloud Associate
- Ansible Automation

EDUCATION

Master of Computer Science 2012 – 2017

Syrian Virtual University, Syria

Bachelor of Software Engineering 2009 – 2011

Syrian Virtual University, Syria

DEVELOPMENT BACKGROUND

Backend / APIs PHP Laravel • Node.js • Express.js • CodeIgniter

Frontend HTML/CSS • JavaScript (working knowledge)

Databases MySQL • Firebase • Aurora Serverless

Full-stack background supports deep collaboration with development teams and informed infrastructure decisions — not a primary focus for DevOps roles.
